

CLINICIAN FINDINGS:

- Effective and user-friendly
- An evolution in therapeutic strategy
- Enhances patient outcomes

Personalising treatment protocols to the unique needs of each patient

‘CELOX™ PPH has significantly changed our department’s approach to managing postpartum haemorrhage (PPH).’

Dr Ondrej Simetka, Head of Department of Obstetrics and Gynaecology, University Hospital Ostrava, Czech Republic

Dr Ondrej Simetka described how, over the past year, CELOX™ PPH had been used in 30 cases of postpartum haemorrhage.

They included ‘16 during caesarean sections and 11 during vaginal deliveries.’

He explained ‘Remarkably, the method succeeded in all but one instance, where additional intervention with selective embolisation of pelvic vessels was required.’

‘This innovative product has allowed us to further personalise treatment protocols, adapting to the unique needs of each patient.’

Change in approach to managing postpartum haemorrhage (PPH)

Not only is the product effective, but it's ease of use has contributed to Dr Ondrej Simetka's conclusions about using CELOX™ PPH in treating his patients.

'CELOX™ PPH offers an effective and user-friendly addition to our treatment arsenal.'

'The evolution in our therapeutic strategies over the year highlights the value of CELOX™ PPH in enhancing patient outcomes.'
